

Product Liability

Product liability is an area of growing importance for many organisations. The implications can be wide ranging and as legislation becomes more stringent it is important for those involved in designing products and services for third parties to understand what their obligations are both under the civil and the criminal law. Those involved in procuring goods and services should also be aware of their rights and responsibilities in relation to their purchases.

The programme

This one-day course is presented in plain English, avoiding the use of legal jargon. Case studies are used to illustrate and help you understand the legal principles. Delegates are encouraged to raise issues of particular concern to their own organisations.

- Civil product liability
- Criminal product liability
- The law in the UK and forthcoming changes
- Aspects of product liability law in other countries such as the USA and Europe

Who should attend?

- Directors and managers involved in designing products and services for the marketplace
- Professionals involved in risk management
- Engineers, scientists, IT specialists, health, safety and environmental professionals, project managers and others who are involved in drawing up specifications for bought-in goods, service and works or other aspects of supply chain management.
- Procurement professionals and other involved in acquiring goods and services from third parties.

Benefits of Attending

- Understand the basic legal principles underlying product liability
- Understand how the law is developing
- Avoid exposing your organization to unintended and potentially costly legal risks
- Manage the risks more effectively
